This thesis is available in print format from the University of Canberra Library.

If you are the author of this thesis and wish to have the whole thesis loaded here, please contact the University of Canberra Library at *e-theses@canberra.edu.au* Your thesis will then be available on the www providing greater access.

**The ACCUMULATION and STORAGE of
SELENIUM in *ANADARA TRAPEZIA*.**

by

Dianne F. Jolley B.Appl.Sci (Hons) (UCAN)
Applied Ecology Research Group
University of Canberra ACT 2601

A thesis submitted in fulfilment of the requirements for the degree of

Doctor of Philosophy of Applied Science

at the University of Canberra.

December 1999

Acknowledgments

This work was conducted in the Faculty of Science at the University of Canberra. My gratitude to those who have assisted me in my work and to those who have patiently put up with me while I complete it. I would like to particularly thank:

Assoc. Prof. Bill Maher, my supervisor, for his guidance, support and patience.

Dr. Jenelle Kyd, whom I adopted as a supervisor upon her arrival at the University. Thank you for your enthusiasm, advise and support.

The *Ecochemistry A6* class of 1995 for their sample collection and preparation.

Kate Dalrymple and *Rebecca Horsfall*, friends, distractions and endless source of encouragement.

Frank Krikowa and *Denise Byrne* for their friendship and for technically 'being there'. Also thanks to *Mike Palmer-Allen*, *Adam Scott*, *Frank Pelligrino*, *Duncan*, *Claire* and *Kath*.

My friends inside and outside this institution who have ably distracted me only too easily! Especially:

Leanne Langton, *Ian Roach*, *Steve Hill*, *Paul Woolmer*, *Glen Brown*, *Michelle Deaker*, *Shelley Baldwin*, *Graeme Chapple*, *Karl Bowles*, *Anne Taylor*, *Rajani Rai*, *Tim Aitkin*, and *Ruth Foxwell*.

Ann Parkinson and *Helen Wallace* – *yes it is finished!*

(Apologies to those I've not actually named, but you are all appreciated!)

Wayne Robinson his SAS expertise.

Dad and *Mum* who were thoughtful enough not to push, but were always quietly confident. And the *Dee* family for their love and generous support.

Most of all I acknowledge *Mark*, *Jason* and *Tiana Dee*, and I'd really like to dedicate this to them. You were my greatest strength, and my greatest weakness! Thankyou.

Abstract

This study examines the occurrence, distribution and storage of selenium in seagrass communities of Lake Macquarie, which is a heavily industrialised area of NSW, where notably high trace metal concentrations have been reported previously. Initially a suite of organisms was collected from a seagrass bed (*Zostera capricornia*) in the south-eastern section of the lake to investigate the bioaccumulation and biomagnification of selenium. All organisms contained selenium, with sediment-dwelling organisms containing the highest Se concentrations. No consistent pattern of significant Se-metal correlations with Cu, Zn and Cd was found. Biomagnification of Se was evident, as concentrations increased from sediments and water to flora (algae and seagrass) to bivalves to crustacea. However, this trend was not continued to the higher trophic groups of invertebrate predators and teleost fish.

The bivalve *Anadara trapezia* was further studied. Intrinsic and extrinsic factors affecting the accumulation of Se were examined. Gender and mass were assessed in a single day study, followed by a temporal investigation of the effect of gender, reproductive cycle, temperature and salinity on Se accumulation. Gender had no effect on the accumulation of Se in *A. trapezia*. Se was present in all tissues (adductor, blood, foot, gills, intestine and mantle) and not immobilised or stored in a specific tissue, indicating that it plays a structural role in the tissues of *A. trapezia*. Se burden increased relative to size (shell length and dry mass) suggesting that Se is metabolically controlled within the organism. Se concentrations were found to fluctuate temporally because of: food availability in response to water temperatures; the reproductive cycle; and associated metabolic activities responding to temperature changes and food availability.

Subcellular selenium associations in *A. trapezia* were examined to assist in the understanding of the fate of Se in marine tissues. Most of the Se was associated with proteins, suggesting that Se has a metabolic role in this marine organism. Proteins

are intrinsically associated with the lipid bilayer of the cell membranes. A number of proteins (94, 85, 43, 36.5, 30, 23.4, 17.4 and 15 kDa) were separated by SDS PAGE from ethanol fractions. Determination of the Se concentration within individual proteins was not possible because the ratio of Se to protein was too low for further analysis.

These findings indicated that Se plays a metabolic role in the tissues of the marine organism *A. trapezia*. The biochemical regulatory mechanism responsible for maintaining Se concentrations within the tissues is currently unknown.

3.5 Summary.....	98

CHAPTER 4. THE EFFECT OF SIZE AND GENDER ON THE ACCUMULATION OF SELENIUM IN *ANADARA TRAPEZIA*.

4.1 Introduction, aims and hypotheses	100
4.2 Materials and Methods	101
4.2.1 Field collections & dissections	101
4.2.2 Digestion and Analysis	102
4.2.3 Statistical analysis	102
4.3 Results	103
4.4 Discussion	110
4.4.1 Gender and Se	110
4.4.2 Effect of Size on Se	111
4.4.3 Se Distribution	112

CHAPTER 5. REPRODUCTIVE STUDY OF *ANADARA TRAPEZIA* IN LAKE MACQUARIE.

5.1 Life Cycle of <i>Anadara trapezia</i>	115
5.1.2 Spawning and fertilisation	116
5.1.3 Larval Stages	117
5.1.4 Trochophore	117
5.1.5 Veliger	118
5.1.6 Pediveliger	118
5.1.7 Juvenile to Adult	118
5.2 Reproduction Cycle of the <i>Anadara trapezia</i>	119
5.2.1 Introduction, aims and hypotheses	119
5.2.2 Sample collection	120
5.2.3 Histological method	120
5.2.4 Quantitative assessment of the reproductive cycle	121
5.2.5 Results	121
5.2.6 Discussion	122
5.3 Summary	126

CHAPTER 6. TEMPORAL VARIATIONS OF SELENIUM IN *ANADARA TRAPEZIA*

6.1 Introduction, aims, hypotheses	127
6.2 Materials and Methods.....	128
6.2.1 Field collections & Dissections.....	128
6.2.2 Digestion and Analysis	128
6.2.3 Statistical Analysis	129
6.3 Results.....	129
6.3.1 Gender	129
6.3.2 Se and mass fluctuations in tissues.....	130
6.3.3 Se distribution	130
6.3.4 The reproductive cycle, Se and water temperature.....	135
6.4 Discussion	135
6.4.1 Gender and Se.....	135
6.4.2 Temporal Fluctuations of Se	135
6.4.3 Se distribution	138
6.4.4 Temperature and Se concentration	140
6.5 Summary.....	141

CHAPTER 7. ISOLATION AND CHARACTERISATION OF SELENOPROTEINS

7.1 Introduction, aims and hypotheses.....	142
7.2 Methods.....	144
7.2.1 Sample collection and dissection.....	144
7.2.2 Selenium Determination	144
7.2.3 Biochemical Fractionation	145
7.2.4 Buffer and Sample Preparation	145
7.2.5 Protein concentration measurement.....	148
7.2.6 Sodium dodecyl sulfate - polyacrylamide gel electrophoresis	148
7.2.7 Electroelution	149
7.2.8 Low Pressure Liquid Chromatography (LPLC)	149
7.2.9 Desalting of samples.....	151
7.2.10 Analysis of LPLC fractions.....	151
7.2.11 Protein concentration by precipitation	151
7.2.12 High Performance Liquid Chromatography	152
